L4: Entry 14 of 22

File: USPT

Sep 26, 2000

DOCUMENT-IDENTIFIER: US 6124267 A

TITLE: O-glycan inhibitors of selectin mediated inflammation derived from PSGL-1

Detailed Description Paragraph Right (102):

Two IgG monoclonal antibodies to PSGL-1, termed PL1 and PL2, were previously described in Moore et al, J Cell Biol. 128:661-671 (1995)). PL1, but not PL2, completely blocks binding of PSGL-1 to P-selectin, and abolishes adhesion of leukocytes to P-selectin under both static and shear conditions. To map the regions on PSGL-1 where the epitopes for PL1 and PL2 are located, a series of fusion proteins containing overlapping regions of the extracellular domain of PSGL-1 were expressed in bacteria. The PSGL-1 sequences in the fusion proteins were as follows: Fragment 1, residues 18-78; Fragment 2, residues 63-123; Fragment 3, residues 109-168; Fragment 4, residues 154-200; Fragment 5, residues 188-258; and Fragment 6, residues 243-308. The DNA encoding each fragment was fused in frame to the DNA encoding dihydrofolate reductase and a 6X His tag, in the expression vector pQE-40 (Qiagen). Each fragment was expressed in bacteria and purified on a nickel affinity column which bound to the 6X His tag. The reactivity of each fusion protein with the antibodies was assessed by Western blotting under reducing conditions.

L4: Entry 20 of 22

File: USPT

Dec 1, 1998

DOCUMENT-IDENTIFIER: US 5843707 A

TITLE: Nucleic acid encoding a novel P-selectin ligand protein

Detailed Description Paragraph Right (134) :

A chimeric protein comprising the extracellular domain of human E-selectin and the Fc portion of human IgG.sub.1 was constructed analogously to the P-selectin chimera, LEC-.gamma.1, described earlier. The soluble E-selectin chimera was expressed in baculovirus-infected *Trichoplusia ni* high five cells (Invitrogen) and purified to homogeneity by Protein A Sepharose chromatography. Plasmid vectors pEA.3/4FT , pPL85, pFCD43, and pEA.sPACE, for COS expression of a(1,3/1,4) -fucosyltransferase (Fuc-TIII), PSGL-1, CD43 (leukosialin), and soluble paired basic amino acid converting enzyme (PACE), respectively, have been described herein and in the literature (Sako et al. (1993) Cell 75, 1179-1186; Rehemtulla, A. & Kaufman, R. J. (1992) Curr. Opin. Biotechnol. 3, 560-565; Wasley et al. (1993) J. Biol. Chem. 268, 8458-8465). Fuc-TVII cDNA (plasmid pMT.FT7) was cloned from an HL60 cDNA expression library using oligonucleotide probes derived from the published sequence (Natsuka et al. (1994) Journal of Biological Chemistry 269, 16789-16794; Sasaki et al. (1994) J. Biol. Chem. 269, 14730-14737). A polyclonal neutralizing rabbit antibody, Rb3443, was raised against a peptide comprising the first 15 amino acids of the mature (PACE-cleaved) N-terminus of PSGL-1. Monoclonal anti-CD43 antibodies from either Becton Dickinson or Biodesign International and isotype control antibodies were coupled to a solid support consisting of Sepharose TM-4B with a covalently attached goat affinity-purified antibody to mouse IgG (Cappel, Organon Teknica Corporation). Affinity coupling of selectin chimeras and murine antibodies to Protein A Sepharose 4 Fast Flow (Pharmacia) and to the anti-mouse IgG resin, respectively, was carried out at a ratio of 2 mg protein/ml of resin. Antiserum Rb3443 was coupled to Protein A Sepharose at 1 ml/ml resin. Coupling efficiencies, indicated by micro-BCA assay (Pierce) of the post-reacted supernatants, were at least 95%. Aprotinin and pepstatin were from Boehringer Mannheim and benzamidine, leupeptin, and phenylmethylsulfonyl fluoride (PMSF) were from Sigma.
